### Changes after the code review:

1. Validate input for being accurate and plausible, such as first and last names should only include alphabets and no numbers.
2. **Signup\_interface** is redundant, hence is deleted
3. **REQ 33** is not needed since **signup\_interface** is deleted
4. Added tons of comment
5. In the code review, other groups recommend not using pack, we still use pack instead of grid because it works better for us.
6. Added description in **login\_interface** telling user what to do
7. Added **Quit Game** option for all stakeholders to quit the whole application
8. Implemented show correct answer after student attempt a question\
9. Implemented progress bar to show the progress during learning a module

### Change Request:

1. Parent class is not needed in this case
2. **REQ 8** - we don't implement for user to select which type of stakeholder they are which signing up because it will breaks the whole concept of program because student might just sign up as admin or teacher
